UNDERSTANDING CUSTOMER ATTRIBUTES & ITEM ATTRIBUTES IN BILLING REGISTER

WHAT IS AN ATTRIBUTE?

An attribute is a feature/property of something.

For example, a few attributes of a product/item can be:

• Manufacturer
• Weight
• Price, and so on.

In Billing Register, the term "attribute" is any feature/property which is not stated directly as a property and thus must be added by the user as an extra 'attribute' in order to use it as a property/feature of the item/customer/employee/supplier.

Let's say you mandatorily need the "Driving License Number" of any customer who wants to purchase an age-restricted product like cigarettes from your store.

But "Driving License Number" is not present as a built-in property/field of customers in Billing Register. So, how do you use it? By adding "Driving License Number" as a Customer Attribute.

Likewise, an item attribute is a property of an item which is not built-in in Billing Register and yet you need to add it as a property (for example, expiry date).
